Senior Mid-Year Exams

Life changes at 40 for pets, too!

Most pets reach “middle age” around the age of 6. As in humans, more frequent checkups are recommended as pets age. Pets age at a rate of 3.5 human years every 6 months!

The mid-year exam focuses primarily on detecting abnormalities that occur at a greater frequency in senior years, but commonly go undetected without medical testing. Identifying abnormalities early can add YEARS to your pet’s life.

Age-related conditions we test for include: **Diabetes, Anemia, Cardiac Arrhythmias, Abdominal Masses, Glaucoma (and other eye diseases), Urinary Tract Infection, and Kidney Disease.**

How old is your pet in human years?

Dogs

Dog Age	Human Age			
	0-20 lbs.	20-50 lbs.	50-90 lbs.	> 90 lbs.
